SUMMARY

AI/ML student focused on building intelligent systems in financial NLP, recommendation engines, and real-time inference. Experienced in building AI applications using LLMs, APIs, and modern backend technologies.

EDUCATION

Atlas SkillTech University

Bachelor of Technology in Computer Science, Artificial Intelligence & Machine Learning

Mumbai, Maharashtra

Graduation Date: Jun 2027

WORK EXPERIENCE

Plattr.io

AI Intern | Flask, OpenAI API, Anthropic API, FMP API

Navi Mumbai Maharashtra

May 2025 - July 2025

- Built an end-to-end financial analysis pipeline using SEC-API, processing 10-Q filings and converting raw EDGAR data into structured datasets (18 metadata fields, 14-field exports).
- Engineered a multi-stage pipeline (querying, text extraction, chunking, transformation, LLM analysis) and developed 14 REST API endpoints for filings, insider trades, transcripts, and multi-mode analysis.
- Integrated OpenAI and Anthropic models with chunked processing, extracting structured financial insights including metrics, risks, and key company signals.

OutPulse ([Open-Source](#))

Machine Learning Engineer | YOLOv11, LiDAR

Mumbai, Maharashtra

Dec 2024 - Feb 2025

- Trained a YOLOv11-based object detection model on 962 images (1,736 annotations) for cone detection, using data augmentation and fine-tuning over 100 epochs (batch size 16, 320×320 resolution).
- Built real-time inference pipelines using OpenCV for webcam and video input, implementing real-time detection workflows from input frames to bounding box outputs.
- Deployed a lightweight model for edge-compatible inference and exported ONNX format for cross-platform deployment, enabling efficient integration into embedded systems.

SKILLS

Languages: Python, SQL, C#

ML/AI: Scikit-learn, NLP, TensorFlow, PyTorch, Recommendation Systems, FAISS, Computer Vision

Frameworks: FastAPI, Flask, React

Databases: PostgreSQL, Redis, MySQL, MongoDB

Cloud: Vercel, Render, Neon, Upstash

Tools: Git, Docker, Power BI

PROJECTS

1. NLP Based Phishing Detection System | Python, Scikit-learn, FastAPI, NLP, Browser Extension ([Github](#))

- Built a phishing detection system on 164K+ emails using NLP, URL, and HTML-based features for multi-signal classification.
- Trained a Naive Bayes model on a 20K+ token vocabulary, achieving 96.7% accuracy and 0.953 F1-score with low false positive rate (~1.9%).
- Developed a real-time system with REST APIs and a browser extension, enabling sub-100ms inference and supporting incremental retraining via feedback-driven pipelines.

2. Game Recommendation System | Python, FastAPI, React, FAISS, Redis ([Github](#)) ([Live Demo](#))

- Designed a hybrid recommendation engine combining Bayesian Personalized Ranking (BPR), 384-dimensional FAISS embeddings, and MMR diversity reranking on 11M+ interactions across 50K+ games.
- Optimized inference through ANN search and Redis caching, achieving 17.8% HitRate@20 with sub-50 ms response times.
- Built and deployed a full-stack application integrating Steam authentication, user library synchronization, and cloud-hosted APIs using Render, Vercel, Neon PostgreSQL, and Upstash Redis.
